

Using Ventura Publisher

Desktop publishing is one of the fastest growing applications of personal computers, producing documents that look as if they had been printed rather than typed. Xerox Ventura Publisher is one of the most popular desktop packages because it permits the user to have full control over all of the typesetting functions. This control also leads to complexity, both in the package and its documentation. Colin Day has written Using Ventura Publisher to bridge the gap between the uninitiated beginner and the user-friendly manual. In a step-by step fashion, he shows the reader how to use Ventura with a pre-existing style sheet, and progresses to teaching how to design and amend new style sheets. After covering the basic methods, the author discusses more advanced topics in a reference format in the final part of the book.
