

Breastfeeding Made Simple: The Benefits and Disadvantages of Breastfeeding

Are you trying to decide between breastfeeding and formula? Did you know breastfeeding can be the difference between a child that is a genius and one that is not? When a mother is pregnant, the mammary glands start to be active in preparation for the production of milk. This gives the baby the chance to enjoy high quality milk that is meant for them. It is not easy for a child to survive for the first few days when they do not have this breast milk. Lactation is the process of consuming milk that is from the mother. It has all the right nutrients, the right temperature and formula for the baby. It is highly advisable for a mother to ensure they breastfeed the milk for the first few months. Some will choose to breastfeed for six months, and some will want to breastfeed for two months. What you'll learn inside: - Why breastfeeding is important - The disadvantages of breastfeeding - How to breastfeed - What breastfeeding provides for your child (aside from milk) - And much, MUCH more! So what are you waiting for? Scroll up and BUY NOW!
