

Introduction to Microprocessors

This book provides a thoroughly readable introduction to microprocessors, assuming no previous knowledge of the subject, nor a technical or mathematical background. It is suitable for students, technicians, engineers and hobbyists, and covers the full range of modern microprocessors. All technical terms are carefully introduced and subjects which have proved difficult, for example 2s complement, are clearly explained. This book is for BTEC National and HNC/D, GNVQ, and City & Guilds 2710. John Crisp is an experienced lecturer in microprocessors, fibre-optics, mathematics and electronics. He has written several training manuals for use on the courses that he teaches.

Textbook for a wide range of introductory courses in FE and HE. Strong practical bias will appeal to practitioners and trainees. Clear, comprehensible: not too much maths!
